```
Pickerian Mathematics:
Goal: to, relativa time experienced by a purson born at time tas a Picker who is not a Harold.
Death Rate: volt) = death applies to entire universe.

() Estimate for to (t) t="Right non"
Vo earth (2024 AD) & 2 deaths Trucki's equation estimate:

(Mrd India)

15,600,000,000,000 galaxies in Universe (Space.com)
rp = 6.24 × 10 18 dentus
2) Estimate for Picker" time factor": To
  (Hugging Chat) Partidas in universe: 1080

Evantson averge par porticle par second: 100
  Picker counts per second: n=1090 Time per count: t=0.01 sec
  Yp= npte=1088 relative seconds per second
3 Equation for tp, uni (t) in valation to 10 (t) (ignoring Harold's Number)
 tp,un; (t) = vo(t) Is this convect for uninimum times?
(1) Equation for tp, mil (t) in calation to tp, un; (t)
  tp, m, (t) = xp tp, m; (t) = x0 (t)
5 Example
   tp, rel (2024 AD) = 8p + 10 = 1088 (6.24 × 10-18) = 6.24 × 1070 seconds = 1.978 × 10 3 years
```
